Middlemarch River Management Update

30 July 2026

Prepared for Strath Taieri Community Board Meeting on 5 August 2026.

This report has been prepared to update the Strath Taieri Community Board on Otago Regional Council's River Management activities in the Middlemarch area. It covers both programmed and reactive work undertaken to date in the 2026-27 financial year (FY).

1. Catchment Investigations

A topographical survey is currently being scoped to help inform designs for localised flood hazard mitigation works on the lower reaches of March Creek, i.e. downstream of the railway line.

2. River Management Inspections

The following inspections of waterways in the Middlemarch area have been undertaken to date in the 2026-27 FY:

- 13 July 2026
- 5 August 2026 (i.e. the morning of the board meeting)

3. River Management Works Programme

ORC Engineering is currently working on a planned programme of river management work for the 2026-27 FY, summarised in Table 1. Although this work is programmed for the current FY, it could be affected by unexpected weather events and resourcing. In addition to the programmed work, we also undertake reactive work when required – though none has been necessary so far this FY.

Note that several potential river management activities are on hold, pending the investigations being undertaken (Section 1 above). These potential activities are summarised in Table 2.

Table 1: Programmed work for Financial Year 2026-27 (continues overleaf)

Watercourse	Location	Work Description	Status
March Creek	From 200m above SH87 to Cemetery Road	Mowing bank vegetation to open the channel and the removal of any blockages. Twice this FY.	Due to take place in December 2026 and late March 2027.
March Creek	From 200m above SH87 to Mold Street	Spraying of juvenile willows and other pest plants.	This will take place from December 2026.
Taieri River and Lug Creek	Tiroiti to Moonlight (43km); Lug Creek (400m)	Juvenile willow and vegetation spraying.	Programmed for between January and March 2027.
Taieri River	Moonlight Bridge to Pukerangi (16km)	Juvenile willow and vegetation spraying.	Following spraying last FY, some additional work may be needed if some juvenile willow and broom remain. It will be tagged onto the Tiroiti to Moonlight spraying (above).

Taieri River	Mareburn Deviation Road, about 2.2km upstream of Hyde-Macraes Road bridge	Gravel redistribution and riverbank protection along a 50m-long section of the watercourse to address erosion.	This will take place between October 2026 and March 2027 (depending on flows).
Taieri River	400m east of the sharp bend in Mason Road	Repairs to the floodbank on the True Right side.	Delivery date currently unknown, as the intention is to use material excavated from the March Creek Bypass Channel when that is re-shaped.
Taieri River	Mason Road, about 1.0km upstream of Moonlight bridge (Tisdall's Bend).	Gravel redistribution and riverbank protection on two beaches along a 300m-long section of the watercourse to address erosion.	Depending on flows, this will be completed between October 2026 and March 2027.
Sutton Stream	Upstream of SH 87 Bridge (1.0km in length)	Removal of problematic branches and trees from the True Right bank.	Any time from 1 October 2026, when access is available.
Sutton Stream	Downstream of SH 87 Bridge (2.0km in length)	Removal of woody blockages (approximately 20 fallen branches)	Any time from 1 October 2026, when access is available.
Deep Stream	Welshes Road to Rocklands (approximately 5.0km)	Spraying of broom on the True Right bank.	Programmed for any time from December 2026 onwards.

Table 2: Potential work that is currently on hold, pending the catchment-wide investigations

Watercourse	Location	Work Description	Status
March Creek	Bypass channel downstream of the railway line.	Channel widening and bank re-shaping to accommodate increased flows.	This work is under further investigation before a final scope of work is confirmed
March Creek	Cemetery section, from upstream of Cemetery Road to Mold Street paper road.	Bank re-profiling and channel cross-section widening to increase capacity.	
March Creek	Downstream from end of Mold St paper road to confluence with Taieri River.	Channel definition through the grassy, swamp-like oxbow section downstream of the cemetery to improve efficiency and conveyance.	
March Creek	End of Mold St / Cemetery Road.	Investigate alternative options available for routing excess floodwater in Mold Street.	

4. Further Information
